

The figure displays a 2D scatter plot with two classes of data points: purple circles and yellow circles. The purple points are located in the upper-left and upper-right regions, while the yellow points are in the lower-left and lower-right regions. A gray shaded region represents the decision boundary, which is an S-shaped curve separating the two classes. A legend in the bottom right corner identifies the purple and yellow circles.

The figure displays a 2D scatter plot with two classes of data points: yellow circles and purple circles. The yellow points form the upper arc of an S-shape, while the purple points form the lower arc. A gray shaded region represents the decision boundary, which is non-linear and S-shaped. A legend in the bottom right corner identifies the yellow circle as 'class 1' and the purple circle as 'class 2'.
